ABSTRACT OF THE DISCLOSURE

- 1 A method of controlling a motor vehicle with an
- 2 automated clutch and an automated transmission includes the
- 3 steps of:
- 4 detecting the vehicle speed,
- 5 detecting if the brake and/or the gas pedal is actuated,
- 6 detecting whether or not the engine is running,
- 7 disengaging the clutch if the engine is found to be running
- 8 while the vehicle is found to be moving faster than a
- 9 threshold speed, and if at the same time neither the brake
- nor the gas pedal is found to be actuated, and
- subsequently re-engaging the clutch if the brake and/or gas
- 12 pedal is found to be actuated,
- wherein prior to re-engaging the clutch, a transmission input
- 14 rpm-rate is determined, and an engine rpm-rate is controlled
- in such a manner that the respective rpm-rates of the engine
- 16 and the transmission are brought towards a closer agreement.
